

ambition

Celery Cutting, Washing & Packing

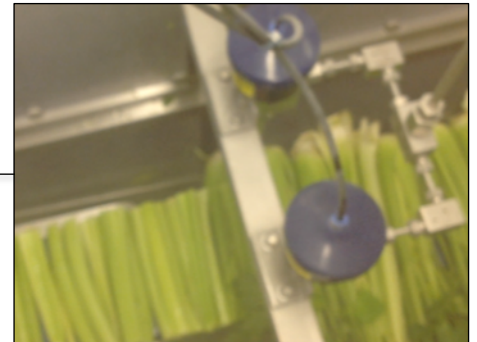

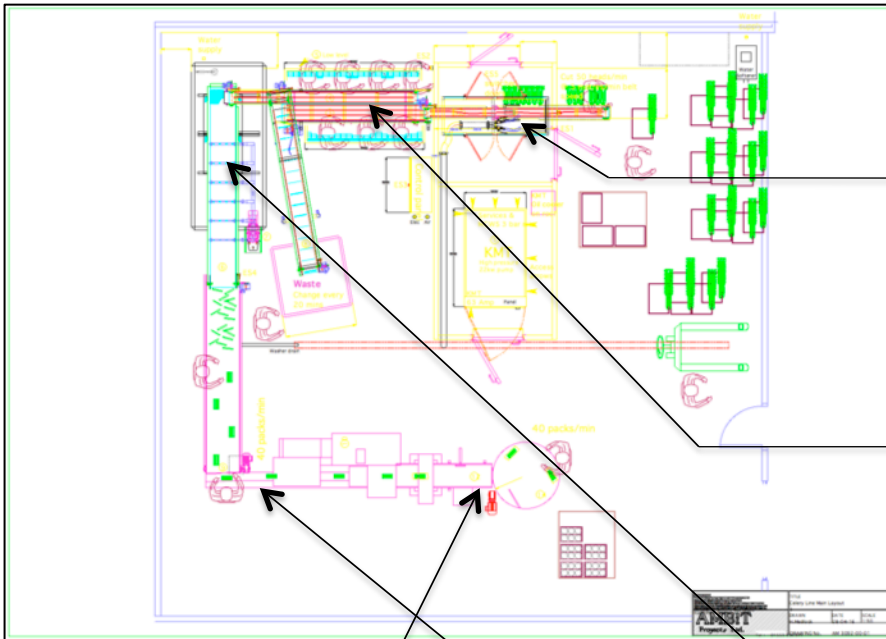

Project Tech

Project Overview:

- Celery is hand fed onto a cutting conveyor, and fed through a water jet cutter to produce celery sticks
- The water jet cutter provides a clean hygienic cut without the use of blades or circulating cutting disk
- The product is inspected for issues and is sterilized and washed clean of dirt and grit.
- Product is finally flow wrapped, check weighed and metal detected.

Product: Celery

Line Capacity: 1000 kg/hr packed weight

Water Jet Cutter – Cuts product to size, clean/hygienic cutting process

Inspection conveyor – removing unsuitable product

Check Weighing, and Metal Detecting

Product formed into stick packs and sent through flow wrapper

Spray Washer – sterilizing product and Cleaning dirt and grit.
